PRACTICAL 6: Create Product Catalog Application using ASP.NET MVC Architecture(Controllers, Models, Views, Routing).

ProductController.cs

```
using Microsoft.AspNetCore.Mvc;
using productmvc.Models;
using System.Collections.Generic;
using System.Linq;
using System.Web.Mvc;

namespace productmvc.Controllers
{
public class ProductController : Controller
{
public ActionResult Index()
{
   List<Product> products = new List<Product>();

   // Laptop
```

```
        Product p1 = new Product();
p1.ProductName = "Laptop";
p1.ProductId = 001;          p1.Category
= "Electronics"; p1.Price = 15500;

        products.Add(p1);

        // Smartphone          Product p2
= new Product();          p2.ProductName
= "Smartphone";          p2.ProductId =
002;          p2.Category = "Electronics";
p2.Price = 45000;

        products.Add(p2);

        // Tablet
        Product p3 = new Product();
p3.ProductName = "Tablet";
p3.ProductId = 003;          p3.Category
```

```
= "Electronics";          p3.Price =
35000;

        products.Add(p3);

        // Headphones
        Product p4 = new Product(); p4.ProductName
        = "Wireless Headphones";          p4.ProductId
        = 004;          p4.Category = "Electronics";
        p4.Price = 8999;

        products.Add(p4);

        // Smart Watch          Product p5
= new Product();          p5.ProductName
= "Smart Watch";          p5.ProductId =
005;          p5.Category = "Electronics";
p5.Price = 15000;
```

```
        products.Add(p5);

        // USB-C Cable          Product p6
= new Product();          p6.ProductName
= "USB-C Cable";          p6.ProductId =
006;          p6.Category = "Electronics";
p6.Price = 599;

        products.Add(p6);

        // Power Bank
        Product p7 = new Product();
p7.ProductName = "Power Bank 20000mAh";
p7.ProductId = 007;          p7.Category =
"Electronics";          p7.Price = 2499;

        products.Add(p7);

        // Webcam
```

```
        Product p8 = new Product();
p8.ProductName = "HD Webcam";
p8.ProductId = 008;          p8.Category =
"Electronics";          p8.Price = 3499;

        products.Add(p8);

        return View(products);
    }

    // GET: Product/Create
    public ActionResult Create()
    {
        return View();
    }

    // POST: Product/Create
    [HttpPost]
    public ActionResult Create(Product product)
```

```
    {
try
        {
            if (ModelState.IsValid)
            {
                // TODO: Add logic to save product to database
return RedirectToAction("Index");
            }
        }
catch
        {
            // Handle exception
        }

        return View(product);
    }

    // GET: Product/Edit/5
public ActionResult Edit(int id)
```

```
        {
            var product = new Product { ProductId = id };
return View(product);
        }

        // POST: Product/Edit/5
        [HttpPost]
        public ActionResult Edit(int id, Product product)
        {
try
            {
                if (ModelState.IsValid)
                {
                    // TODO: Update product in database
return RedirectToAction("Index");
                }
            }
catch
            {
```

```
            // Handle exception
        }

        return View(product);
    }

    // GET: Product/Delete/5
public ActionResult Delete(int id)
    {
        var product = new Product { ProductId = id };
return View(product);
    }

    // POST: Product/Delete/5
    [HttpPost]
    [ActionName("Delete")]
    public ActionResult DeleteConfirmed(int id)
    {
```

```
            // TODO: Delete product from database
        return RedirectToAction("Index");
            }
          }
}
```

Product.cs namespace

```
productmvc.Models
{
   public class Product
   {
      public int ProductId { get; set; }
public string ProductName { get; set; }
public string Category { get; set; }
public double Price { get; set; }
   }
}
```

Index.cshtml

```
@model List<productmvc.Models.Product>

<!DOCTYPE html>

<html>
<head>
   <title>Product List</title>
```

```
</head>

<body>

  <h2>Product List</h2>

  @foreach (var item in Model)
  {
    <div>
      <h3>@item.ProductName</h3>

      <p>Product ID: @item.ProductId</p>
      <p>Category: @item.Category</p>
      <p>Price: ₹@item.Price</p>

    </div>
  }
```

```
</body>

</html>
```
